Technical Operator building at the intersection of AI Systems, Product Architecture, and Engineering Execution.

EDUCATION

SRM Institute of Science and Technology

Chennai, India

B.Tech. Computer Science & Engineering – Data Science Specialisation | CGPA: 9.57/10

June 2023 – May 2027

Waseda University – Semester Exchange

Tokyo, Japan

School of Fundamental Science and Engineering

Sep 2025 – Mar 2026

EXPERIENCE

AI Product & Engineering Intern

Feb 2026 – Present

Git Software Technologies (Remote)

Swindon, England, UK

- Owned end-to-end requirement scoping and system behavior orchestration for an enterprise-scale knowledge retrieval platform, reducing user query-to-insight latency by 65%.
- Managed cross-team execution, dependency alignment, and milestone planning across distributed engineering pods, translating customer feedback into structured technical specs and API definitions.
- Designed evaluation benchmarks to manage non-deterministic model behavior, driving iterative optimization cycles based on correctness and predictability metrics.

Research and Development Intern

Mar 2025 – Present

Samsung Research Institute – Bangalore (Remote)

Bengaluru, Karnataka

- Evaluated cost-quality-latency trade-offs for large-scale model optimization, managing experiments that compressed Llama 2-7B models to cut memory footprint by 40% with a 1.5× inference speedup.
- Bridged the gap between model prototyping and system constraints by developing benchmarking tooling to validate real-world pipeline reliability on high-performance infrastructure (NVIDIA A100).
- Synthesized experimental findings into infrastructure recommendations that influenced deployment strategy across core software components.

Technical Trainee Intern – Govt. & Public Services

June 2025 – Aug 2025

KPMG India

Gurugram, Haryana

- Led a cross-functional discovery initiative with 3 separate client teams to translate ambiguous regulatory requirements into an automated data validation pipeline handling 50,000+ records per batch.
- Defined product success metrics (data consistency, processing latency, stakeholder trust) and used them to drive go/no-go delivery calls with senior organizational leadership.
- Standardized reusable validation workflows and automation rules, cutting systemic process turnaround time by 20%.

PROJECTS

VeriLoad – Automated Reconciliation & Validation Engine | *Live Demo*

Apr 2025 – May 2025

- Shipped a 0-to-1 full-stack platform solo; scoped requirements, designed the data schema, and built a validation engine achieving 91% accuracy across 120+ non-deterministic edge scenarios.
- Designed UX patterns focused on user trust, exposing system certainty via a dashboard displaying detected vs. expected counts and real-time confidence scores.

Lucid AI – Attention Analytics Platform | *Live Demo*

Jun 2026

- Architected an asynchronous multi-step analytic platform. Designed resilient service orchestration with typed APIs and persistent state management, ensuring reliable execution across distributed workflows.
- Managed systems-level trade-offs between calculation complexity and runtime cost by implementing fallback data layers (PostgreSQL to SQLite) for disconnected operation modes.

Product Strategy Memos Portfolio | *Notion Portfolio*

Jun 2026

- Authored technical product memos on consumer technology and AI agents, establishing product frameworks evaluating multi-step reasoning reliability, retention loops, and human-in-the-loop UX patterns.
- Developed feature prioritization scoring rubrics based on user adoption friction, processing overheads, and target KPI velocity.

TECHNICAL & PRODUCT SKILLS

Program Management: Requirement Scoping, Cross-team Execution, Dependency Alignment, Milestone Planning, Evaluation Frameworks, System Trade-off Analysis (Cost vs. Latency vs. Quality)
AI & ML Systems: LLM RAG Pipelines, Vector Search Calibration, Model Optimization (Quantization), Iterative Prompt/Pipeline Engineering, Error Drift Analysis
Data & Core CS: Distributed Systems Architectures, Typed APIs, Resilient Orchestration, SQL (PostgreSQL), ETL Automation, Data Structures & Algorithms
Tooling & Infra: Python, FastAPI, Docker, AWS (EC2, S3, RDS), Next.js, Git

CERTIFICATIONS & ACHIEVEMENTS

AWS Certified Developer – Associate	May 2026
Oracle AI Vector Search Professional Certification	Sep 2025
McKinsey Forward Program – Leadership, Structure & Business Agility	Dec 2025
Aspire Leaders Program – Harvard Faculty-Led Leadership Cohort	Dec 2025
AlgoVerse AI Research Program – Merit Scholar (Top 1%)	Jun 2025
